

## A PLATFORM BUILT FOR EMERGENCY USE

### MOBILE FIRE TRAILER FOR RAPID WATER DEPLOYMENT

Fire departments are often called to operate beyond the reach of hydrants and fixed tanks. Rural coverage areas, agricultural incidents, wildland interface zones, and damaged infrastructure can all create delays in water access when time matters most.

The patent-pending Water Wizard® gives departments a practical way to stage and deliver water where the existing supply is limited.

### EXPAND WATER ACCESS WITHOUT EXPANDING FLEET

The Water Wizard adds mobile water capacity without committing additional engines, tankers, or staffing. It supports a wide range of fire response and readiness operations:

- Rural and agricultural fire response
- Grass fires and controlled burn support
- Wildfire and brush truck support
- Standby fire suppression coverage for high-risk zones
- Mop-up and overhaul operations
- Emergency water supply staging

Every department operates differently. Our mobile water trailer can be configured to match your response needs, equipment standards, and operational workflow.

#### KEY FEATURES INCLUDE:

- 1,250-gallon heavy-gauge steel tank with dual baffle system
- Durable frame construction for off-road access when needed
- Brake configuration options for controlled stopping under load
- Sealed wiring system with LED lighting
- Fire hose compatibility and adapter-ready connection capability
- Tool storage capability for hose, fittings, and response equipment

#### ADDITIONAL OPTIONS TAILORED TO THE WAY YOUR CREW WORKS:

- Pump and layout configuration selections
- Department lighting and visibility upgrades
- Custom branding and equipment configuration
- Various fire foam kits
- Cold-weather planning and operational configuration support
